===== INVENTORY SYSTEM =====
1. Display Products
2. Search Product
3. Sort Products by Price
4. Add Product
5. Update Product Price
6. Delete Product
7. Exit
Enter your choice: 1
Product: laptop | Price: ₹ 850000
Product: mobile | Price: ₹ 300000
Product: keyboard | Price: ₹ 18000
Product: mouse | Price: ₹ 10000
Product: headphones | Price: ₹ 12000

===== INVENTORY SYSTEM =====
1. Display Products
2. Search Product
3. Sort Products by Price
4. Add Product
5. Update Product Price
6. Delete Product
7. Exit
Enter your choice: █

```

Exercise

Que 1 : Develop a price engine that takes a list of floating-point asset costs, sorts them from highest to lowest value, and displays the top three priciest entries.

CODE :

```
prices = [100.5, 250.75, 50.25, 500.0, 300.5]

prices.sort(reverse=True)

print("Top 3 highest prices:")

for price in prices[:3]:
    print(price)
```

OUTPUT :

PS C:\Users\AJIN\AppData\Local\Programs\Microsoft VS Code> & C:\Users\AJIN\AppData\Local\Programs\Python\Python312\python.exe "c:/Users/AJIN/Documents/pushkar/PRACTICAL 10n.py"
Top 3 highest prices:
500.0
300.5
250.75
PS C:\Users\AJIN\AppData\Local\Programs\Microsoft VS Code> |
```

Exercise

Que 2 : Create an active inventory catalog manager that searches a list of product labels for a userspecified item name. If the item is found, the script should confirm its presence and display its index location.

CODE :

```
products = ["pen", "book", "bag", "pencil"]

item = input("Enter item name: ").lower()

if item in products:
    print("Item found")
    print("Index:", products.index(item))
else:
    print("Item not found")
```
